

Devicix

Engineering the Future of Medicine

Process Development and Manufacturing

Process development and scale up are critical elements for medical device companies seeking to launch new products. Devicix's process development and manufacturing services covers everything from initial prototype to full scale manufacturing and assembly operations. We help our clients identify the simplest, most cost-effective solution to fulfill these needs while providing a unique perspective on manu-

facturing requirements. Our process development services focus on assessing risk in each process, eliminating inspections where validation is feasible and managing the manufacturing transfer to full scale commercial manufacturing. In-house capabilities cover pilot line production to sustaining commercial production.

Devicix's capabilities provide/address:

- Vendor identification / qualification
- Materials procurement
- Incoming inspection work instructions
- Incoming materials inspections / records
- Manufacturing work instructions / records
- In process testing and verification
- Process FMEAs
- Process development and validation
- BOM management
- Final product inspection / release
- Clean manufacturing
- Labeling
- Process validation
